

## LIGHTS, LIGHTS and LIGHTS

Lee McClellan — Safety Officer

Well, hopefully before our October HOG Chapter Meeting, the weather will start to cool off.

That means it will start to get dark earlier. This is the time to re-evaluate the lights on your bike.

Can you see at night riding and can you BE seen when riding at night? I am a big fan of extra lights, front and rear. I want to be able to be seen coming and going!

Harley Davidson and other companies make a wide selection of lights. There are some that are Auxiliary driving lights and turn signals.

With the new LED's, they are brighter than ever. Now might be the time to upgrade your old lights to brighter and better. Hope to SEE everyone on the road!

Stay safe  
Lee
